|---|---|---|---|
| Security & privacy fixes | New features | Improvements | Bug fixes |

**In short:** this update closes some privacy gaps, stops the same vehicle from being listed twice, gives the team safe ways to hide, block or delete records without losing important history, and makes verification history, CRM and analytics easier to work with. Everything below has been completed and tested in our development environment and will be visible on the live site after the next deployment.

## 1. Security & privacy PRIORITY

### Identity-card templates locked down

**BEFORE** The Aadhaar, PAN and RC card template pages could be opened by anyone on the internet, and a printable card could be produced from them.

**NOW** The pages have been removed from the public website. Inside the admin portal they open only for the Super Admin, and every screen and printout carries a **"SAMPLE · Not a valid document"** watermark.

### Customer contact details protected in the CRM

**BEFORE** A partner, and even a customer who had only started partner sign-up, could look up any user's name, email and city by entering a mobile number.

**NOW** The CRM opens only for partners whose KYC is approved, and a partner sees details only for people who already have an enquiry with them. Staff access is unchanged.

### Buyer privacy on sold vehicles

**BEFORE** The website showed a shortened buyer name, but the full name (and sometimes a phone number or email) still reached the visitor's browser.

**NOW** The name is shortened on our server (for example "Sun***"), so the full details never leave the system.

### Limits on paid verification checks

**BEFORE** Each PAN, GST, Aadhaar or vehicle-number check costs money, and there was no limit on how many a single account could run.

**NOW** Partner KYC checks are limited to **15 per account per day** (a normal KYC needs about 4). Vehicle-number checks on the listing form are limited to **40 per day** for sellers and dealers. JCB Exchange staff are not limited.

### No enquiries on hidden listings

**NOW** Listings that are unlisted, suspended or blocked can no longer receive enquiries from the website.

## 2. New features NEW

### Duplicate vehicle protection, with resale support

- While the seller types the registration or chassis number, the form shows straight away whether the vehicle is new to JCB Exchange or already listed.
- The same vehicle cannot be live twice, even if the number is typed in a different format.
- A vehicle that was sold earlier can be listed again for resale. The "Resale" tag is shown **only to admins**, never to customers.

### Listing visibility controls (the ⋮ menu)

- **Sellers and dealers:** Unlist and Relist their own listings, and send a suspended listing back for review.
- **Admins:** Suspend, Restore, Block and Unblock, with a reason that the seller can see.
- Blocking a listing also blocks that vehicle number across the whole platform until it is unblocked.
- Every change is recorded in the audit log, and the seller can be notified.

### Safe delete, with a preview of the impact

- Before deleting a customer, staff member, partner, listing, Sold Vehicle or RTO record, a screen shows what will be removed, what will be kept, and anything that prevents deletion.
- The admin ticks what to remove and then confirms.
- Safer options are offered on the same screen: block, suspend, close, unlist or cancel sale.
- **Payment, invoice, legal and audit records are never deleted.** Only the Super Admin can permanently delete accounts.

### One consistent confirmation window

21 delete actions across the portal now use the same clear confirmation window, replacing the plain browser pop-ups.

### Verification history with pages

Identity Hub (PAN, GST, Aadhaar, Mobile to PAN) and Vehicle & Transport (RC, challan, driving licence, chassis) show the latest 20 checks with a **View all** button. The full history page has search, type filters and 20/50/100 results per page, and search now covers every record, not just the newest ones.

**Won Customers directory**

A new page lists every customer whose deal was won, with owner, location, Prime status and the date of the last enquiry.

**My Listings for sellers**

Sellers can see when a listing is unlisted, suspended or blocked, read the admin's reason, and use the matching action button.

**Sell Vehicle form keeps a draft**

If a seller closes the long Sell Vehicle form by mistake, the details they entered are kept and restored when they come back.

## 3. Improvements BETTER

| AREA | WHAT CHANGED |
|---|---|
| **Clean, readable web addresses** | Pages show names instead of long codes, for example `/crm/leads/ravi-dewangan-jcb-3dx-…` and `/machines/jcb-3dx-super-2021-raipur-…`. Old links still work. |
| **CRM** | Redesigned dashboard, campaigns (audience presets and WhatsApp preview), reports and pipeline screens, with more useful numbers. |
| **Listing analytics** | One page per listing covering views over time, enquiries, pricing, sale details and data checks. |
| **RTO & Sold Vehicle** | Balances and expenses at a glance, one-tap call and WhatsApp to customer, seller and RTO agent, and direct links between linked records. |
| **Identity Hub & Vehicle & Transport** | Refreshed overview screens; Mobile to PAN is available again for staff with permission. |
| **Clear error messages** | Users now see what to fix (for example “Vehicle Number is required”) instead of a general “server error”. |
| **Employee roles** | Standard roles set up: Manager, CRE, Accountant, CA, HR and SEO Manager. |
| **Jobs & recruitment** | A job that has applications cannot be deleted, so candidate history is kept; it can be closed instead. |
| **New-server setup** | A safe, repeatable process to set up the database on a new server or for a restore. |

## 4. Bug fixes FIXED

| PROBLEM | FIX |
| --- | --- |
| **Listings accepted impossible values** | Negative prices, years such as 3000, impossible running hours and empty titles are now refused with a clear message. “Price on request” still works. |
| **Cancelled sales stayed visible** | After a sale is cancelled or a sold record is deleted, the vehicle stays hidden (Unlisted) instead of showing on the website. |
| **Deleting from RTO skipped money checks** | RTO and Sold Vehicle deletions now apply the same payment, receipt and bill checks. |
| **Staff and customer deletion errors** | Deleting a staff account no longer fails, and the customer delete summary shows the right counts. |
| **Machines page could load empty** | When the website's server-address setting was missing, a security setting blocked the vehicle list. It now loads correctly. |
| **Engine numbers saved differently** | The admin portal and the website now save engine numbers with the same rule. |
| **Verification history showed an old page** | Clicking through pages quickly no longer shows results from a previous page. |
| **Identity Hub search was incomplete** | Search and filters now look through all records, not only the newest 40. |
| **Super Admin could block own account** | This is now prevented. |
| **Missing or unavailable files** | A clear “file not found” or “try again later” message replaces the general server error. |

## 5. How this was tested QUALITY

- All automated checks pass: 627 for the server, 378 for the admin portal and 86 for the website.
- A full walk-through in a separate test copy of the system (no live data touched, no messages sent): **1,675 checks** across all 648 system functions as six kinds of user (visitor, customer, dealer, staff without permissions, manager, super admin).
- All 207 pages of the website and portals were opened and load correctly.

## 6. Next steps & your input ACTION

**Go-live**

These changes will appear on the live website and portals after the next deployment. We will confirm once it is done.

**Decision needed: RTO costs on public listing pages**

The public listing page currently also sends RTO expenses, vehicle maintenance cost and the RTO agent's name. Please confirm whether buyers should see these, or whether we should hide them.

**Recommended follow-up**

A blank PAN template image used by the admin portal can still be downloaded without logging in. We recommend moving it behind login as a small follow-up task.
